***Allowable Subject Matter***

Claims 1, 7, 9-14, 16, 20-25, 27, 31-36, 53-57 are allowed.

The following is an examiner's statement of reasons for allowance:

The present invention is directed towards a system, method, and apparatus for automating the enrollment, renewal and revocation of electronic certificates through the use of workflows. Independent claims 1, 16, and 27 each identifies the uniquely distinct feature of:

associating each workflow of a plurality of workflows with a corresponding domain of a plurality of domains in an Identity System, each domain of said plurality of domains comprising one or more entities and each workflow of said plurality of workflows using a different predefined set of steps to perform a certificate related action affecting validity of the certificate, the certificate comprising a security credential, wherein each workflow in said plurality of workflows corresponds to a different set of characteristics for a user, wherein the first workflow contains a first set of steps and a second workflow in said plurality of workflows contains a second set of steps, wherein said first set of steps is different from said second set of steps, wherein said first workflow calls for obtaining an approval before performing a certificate related action for users having a first user type, and wherein said second workflow does not call for obtaining an approval before performing a certificate related action for users having a second user type;

receiving at the Identity System a request for a first certificate related action for a first user wherein the first certificate related action is selected from a group consisting of a certificate enrollment action, a certificate renewal action, and a certificate revocation action; determining from said plurality of domains a domain that includes said user;

determining from said plurality of workflows, one or more workflows associated with said domain and capable of performing said certificate related action;

retrieving by the Identity System from said one or more workflows associated with said domain a first workflow for responding to said request wherein retrieving

the first workflow comprises selecting the first workflow from the one or more workflows associated with said domain based on the first certificate related action and a user type of the first user from a set of characteristics for the first user from an identity profile for the first user maintained by the Identity System being the first user type and wherein the request includes an identification of said identity profile for the first user;

performing said first workflow, wherein performing said first workflow comprises executing said predefined set of steps of said first workflow to perform said certificate related action including retrieving an approval response from an entity associated with the first user and identified in the identity profile for the first user and obtaining a certificate and a real time status for the certificate from a certificate authority based on the approval response; and

storing the certificate and said real time status in the Identity System, wherein the certificate authority is external to the Identity System.

The closest prior art, United States Patent No. 6,161,139 to Win et al (herein after "Win") discloses a system for managing and administering from several distributed locations, a system for facilitating secure and selective access to network resources based on the role of a user of the resources including reliance upon certificates for the authentication of users. The next closest prior art, "Security Considerations for Workflow Systems" by Kittel et al. (herein after "Kittel") discloses a set of workflow engines that provide a set of functions through which systems direct activities to various components and on which security functions such as authentication and access control can be applied.

Nowhere do the prior art references specifically address workflows for performing certificate related actions that affect the validity of a certificate and that treats different users differently based on the user's type and domain. As such, the prior art, either singularly or in combination fails to anticipate or render obvious the present invention.

***Conclusion***

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
